How to fix Firefox issues on Windows 10

mozilla

Firefox®

Windowsreport

Firefox is one of the most used web browsers in the world, and this application has been around for years. Firefox is known as one of the best browsers for Windows platform, but unfortunately, it seems that [Windows 10](#) users are having certain issues with Firefox on Windows 10.

Windows 10 and Firefox issues

Solution 1 – Disable HTTP Scanning in Avast

Users reported certain issues with Firefox on Windows 10, and according to them, Firefox isn't displaying graphics and it won't load websites. This can be a big problem if you use Firefox as your default browser, but fortunately, there's a way to fix this issue.

According to users, the problem is caused by your antivirus software, most noticeably Avast, and in order to fix this problem you need to disable HTTPS Scanning in Avast. To do that, follow these steps:

Before addressing any computer issue, we always **recommend scanning and repairing** any underlying problems affecting your PC health and performance.

Downloading drivers manually can be a long and tedious process, therefore, in order to ensure your computer is running error-free and using the latest drivers, you can use tools such as **DriverAgent Plus** to download quickly all the necessary drivers.

To use **DriverAgent Plus** follow these simple steps:

1. Download [DriverAgent Plus](#) (100% safe download and endorsed by us).
2. Once the download is complete start the DriverAgent Plus.
3. Click the Start Scan button and let DriverAgent Plus download all the necessary drivers.

Outdated drivers can often cause crashes, file loss and even **permanent** damage to your computer. To ensure that your computer is stable, make sure to regularly check for driver updates with DriverAgent Plus.

1. Open **Avast dashboard** and choose **Settings** from the left sidebar menu.
2. Go to **Active Protection** and click on **Customize** next to Web Shield.
3. **Uncheck Enable HTTPS Scanning** and click **OK**.

After performing aforementioned steps, issues with Avast should be resolved. If you don't use Avast as your security software, you should try disabling your antivirus as a temporary solution. If disabling antivirus doesn't help either, you might have to uninstall it and switch to a different antivirus software. We did a list of [best Windows 10 antivirus programs](#), so feel free to check it out if you decide to change your antivirus program.

Solution 2 – Disable problematic add-ons

You can enhance the functionality of Firefox with various add-ons, but in some cases new add-ons can cause Firefox to crash on Windows 10. According to some users, the add-on that caused the crash for them was FlashGet, but bear in mind that almost any add-on can cause Firefox to crash, so you might have to disable or remove certain add-ons in order to fix this issue. To disable a certain add-on in Firefox, follow these steps:

1. Open Firefox and click the **Menu** button in top right corner.
2. Choose **Add-ons** from the list.

3. Click the **Extensions** tab on the left. List of installed extensions should open.
4. Now disable all extensions by clicking the **Disable** button.

5. **Restart** Firefox and check if the issue is resolved.
6. If the problem is fixed, you can try enabling extensions one by one until you find the one that is causing you problems.

If you can't open Firefox at all, it's always a good idea to run it from Safe Mode. To access Safe Mode do the following:

Keeping your PC at peak performance isn't as hard as you think, especially if you have a proper software tool such as **ReimagePlus**.

This software that we **strongly recommend** will repair most computer errors, protect you from file loss and hardware failure and optimize your PC for maximum performance.

1. Download [ReimagePlus](#) (100% safe download and endorsed by us).
2. Click **"Start Scan"** to find Windows issues that could be causing PC problems.
3. Click **"Repair All"** to fix all issues.

In order to quickly fix the issue like the one which brought you here and prevent other ones from happening, we advise you to [download ReimagePlus now!](#) Thus, not only will you have an error-free PC, but it will also be as fast as when you first bought it.

1. Press the **Start** button, click the **Power** button, **press and hold Shift** on your keyboard and choose the **Restart** option.

2. Once your computer restarts, choose **Troubleshoot > Advanced options > Startup Settings** and click the **Restart** button.
3. After your computer restarts again press **F5** to choose *Safe Mode with Networking*.
4. When Safe Mode starts, try disabling any extensions from Firefox by following the steps above.

If Firefox works normally in Safe Mode, the issue is probably caused by some third-party program that you have installed, so you'll have to find the problematic program and disable it in order to fix this problem.
